

Title

Sustainability Management

Scope

Proposal to strengthen the training offer of the Tomar School of Technology (ESTT) of the Polytechnic of Tomar (IPT), through the microcredential course in Sustainability Management with a view to operational application in the current context of Organisations.

In line with this, we submit this proposal to create a new course entitled “Sustainability Management”, which would carry 3 ECTS credits and correspond to a total of 81 hours (21 of which would be contact hours).

Context

Given the UN's sustainable development challenges (SDG 2030) and the ongoing impact of climate change, sustainability management in organisations is a pressing need. This makes an approach that focuses on environmental, social and economic dimensions essential.

Target Audience

Technicians, middle management staff and senior executives staff from public or private organisations who are interested in acquiring or developing knowledge and skills in sustainability management applied to organisations.

Student Places

The minimum number of places is ten (10).

Course Structure

The training will cover the following topics, as indicated in the attached form IPT.SIGQ.MOD FOR 10 10 — 2:

1. Principles of quality management;
2. Standards and benchmarks for sustainability management
3. The sustainable development goals and how they are applied in organisations;
4. Legal and regulatory requirements relevant to sustainability.
5. Implementation and development of the sustainability management system.

Assessment Method

Written test – 100%
